**Importance:** High

Mark, this is the information I received when asking about the Fayetteville Observer article. Hopefully this will address the compounds in question. I haven't had a chance to review the report. Use this for your information only and if you wanted to disseminate, let me get the OK JIC from the permitting branch beforehand. Have a great weekend.

Chris,

Michael Scott sent me this report to review regarding the 25 compounds discussed in the news article.  
Hoping this addresses it,  
Julie

Julie,

This should be the report you asked about.

Michael

Dr. Ghiold,

Attached please find a cover letter and a PDF version of the *Additional Site Investigation Report* for the Chemours Fayetteville Works. This version of the report contains the text, tables and figures. Due to the size of the laboratory reports, they are being sent to you on CD with two additional hard copies of this report.

Please know that we are continuing to gather more information and data on the site and as we do, we will share that information with NCDEQ and continue to work collaboratively. As we continue to move through the investigation, corrective measures review and finally remedy selection process, we are also working in parallel to identify any interim responses that could be quickly implemented, with special attention toward those which could potentially have positive impact on the continued reductions of PFAS concentrations at outfall 002.

Please call or e-mail me with any questions or comments.

Respectfully submitted,  
Kevin
